

### VAN-Mg (Mg 9.5%)

- VAN-Mg is a fine white colour powder chelated with EDTA & Aminos and is water-soluble.
- VAN-Mg accelerates photosynthesis in plants and is required to give leaves their green colour.
- Without Magnesium, chlorophyll cannot capture sun energy needed for photosynthesis.
- Magnesium deficiency appears on older leaves first as they become yellow between the veins and around the edges. Purple, red, or brown may also appear on the leaves.
- Magnesium is also used by plants for the metabolism of carbohydrates and in the cell membrane stabilization

**Dosage:** Foliar Application - 50 gm/acre.
