

VAN-ZIN (ZN 12%)

- VAN-ZIN is a white powder formulation that is chelated with EDTA & Aminos
- The formulation of VAN-ZIN is easily translocated within the plants because unlike Zinc Sulphate it is partly systemic.
- VAN-ZIN increases the uptake of phosphorous content in roots.
- VAN-ZIN is available to plant systems very quickly. This is in contrast with other forms of Zinc sources which make Zinc unavailable because a large quantity of such Zinc will be fixed in the soil.
- In high pH conditions, zinc from other sources may not be available Dosage: 50 gm/acre to plant.
- VAN-ZIN is versatile since it can be used for all kinds of crops.

Dosage: Foliar Application - 50 gm/acre
